

ROBINIA ROPE BALANCE BRIDGE

PT-AP-0151

Our Robinia Rope Balance Bridge is a fantastic tool for promoting children's physical development. As they teeter from one end to the other, they engage a wide range of muscle groups, enhancing their strength, coordination, and motor skills. The uneven surface of the rope requires constant adjustments, helping children develop their balance, stability, and spatial awareness. Why not add in a challenge and create your own bespoke agility course by adding products from our trim trail range for extra challenge and risky play!

Legs to be installed approx. 600mm into the ground.

Encourages active play!

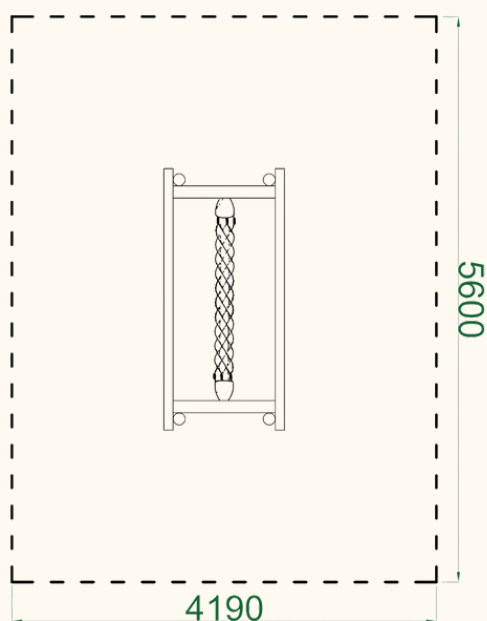

Robinia (Black Locust/False Acacia) is an extremely durable, rot resistant hardwood timber, with no need for treating. Each piece is sanded to create a smooth finish.

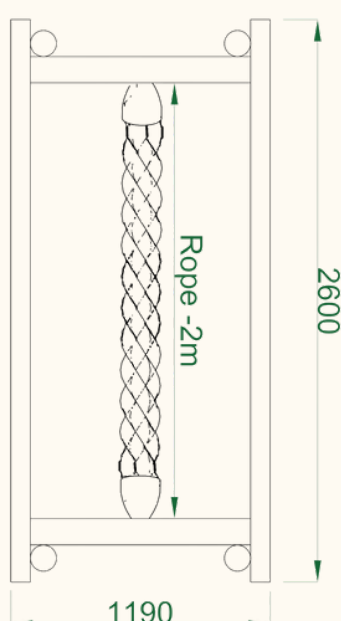

These ropes are fabricated using 8 strand x 160mm plaited polypropylene rope with 16mm thread bar for fixing. Ropes to be securely fastened at both ends to prevent sagging over time.

Free Fall Space -

Approx. 24m²
