

PLAYGROUND WATER RUNNING TRAYS

PT-SP-0001

The Playground Water Running Trays combine the natural aesthetic of timber with the interactive elements of a water feature, creating an engaging and multi-functional structure. The trays are designed to allow water to flow from one level to another, mimicking the movement of a natural stream. The design emphasizes both form and function, seamlessly blending into outdoor environments such as playgrounds, parks, or educational settings. In playgrounds, the cascading water trays serve as an interactive play element, encouraging children to explore the principles of gravity, flow, and water movement.

**Encourages
sensory play!**

All our timbers are pressure-treated with a chrome-free and arsenic-free preservative which protects against decay and insect attack. Each piece is sanded to create a smooth finish.

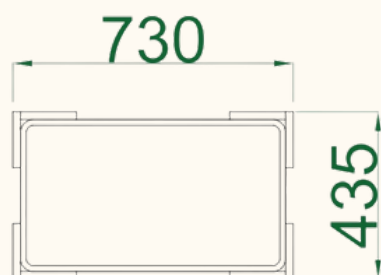

The 40L rectangular Black water tubs are extremely durable, making them a perfect containment to hold water. The depth of the tubs is approx. 220mm.
